Dis. 2  
Angolo forbice

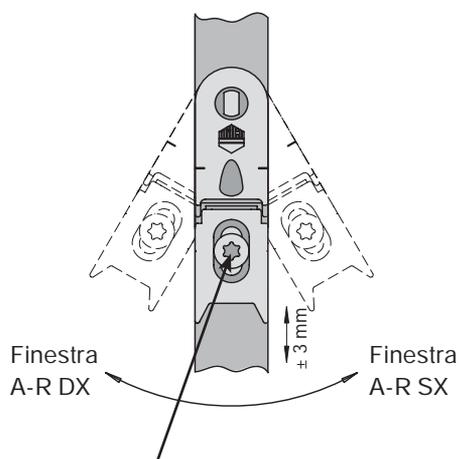

Dis. 3  
Bandella forbice con fissaggio a baionetta

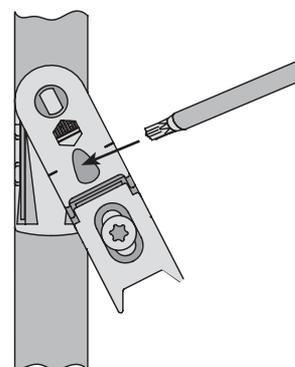

Il fissaggio a baionetta deve essere girato di 90°!

### Regolazione dispositivo alza-anta

- allentare la vite con chiave Torx 15
- posizionare in altezza
- serrare

### Reversibilità del dispositivo alza-anta

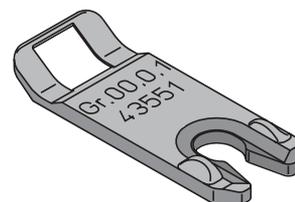

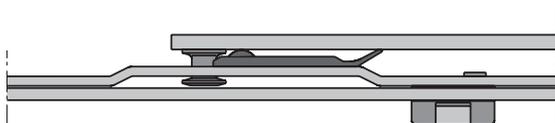

- premere la molla con la chiave Torx 15 (Cod. 44192)
- portare il dispositivo alza anta in posizione centrale

Con l'aria giusta sul traverso inferiore, occorre mantenere un'aria di 0,5 mm fra dispositivo alza anta e scontro.

### Delimitatore d'apertura per forbici

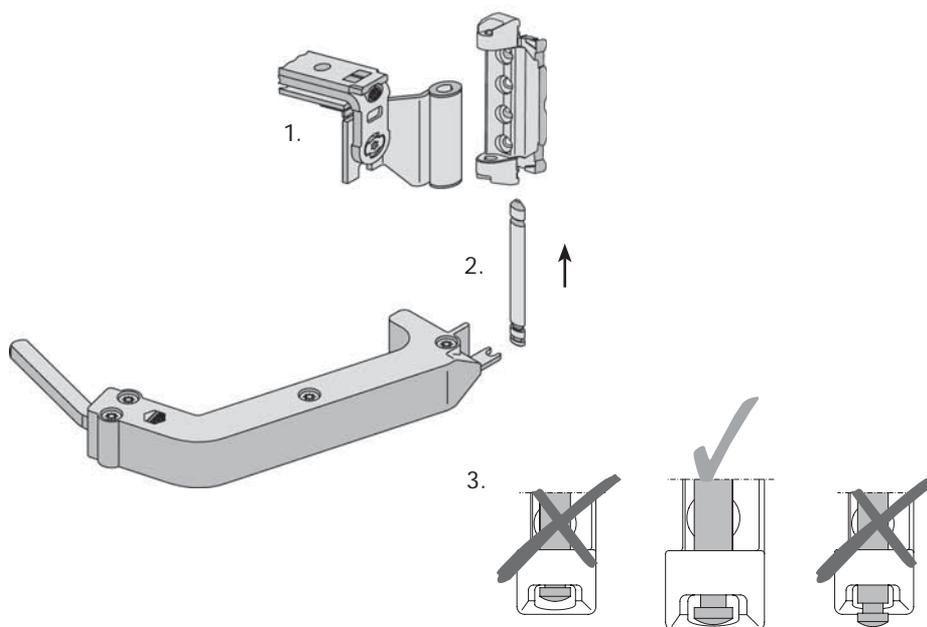

Con HBB inferiore a 600 mm bisogna montare un delimitatore d'apertura per forbici. A causa delle diverse battute, questo può rendersi necessario già con HBB inferiore a 800 mm.

### Aggancio dell'anta sul telaio – esecuzione con doppia tazza

Inserire l'anta con un angolo d'inclinazione di 90° nella cerniera angolare.

1. Inserire la bandella nel supporto forbice e chiudere l'anta (non serrarla).
2. Inserire fino in fondo (scatto) il perno del supporto forbice.
3. È assolutamente indispensabile un controllo visivo della posizione del perno supporto forbice (vedi dis.)!

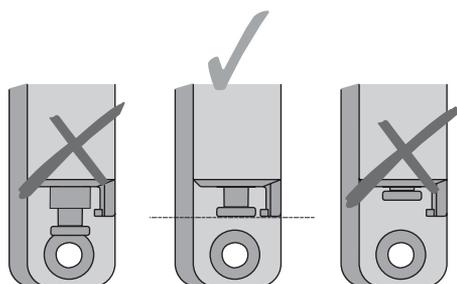

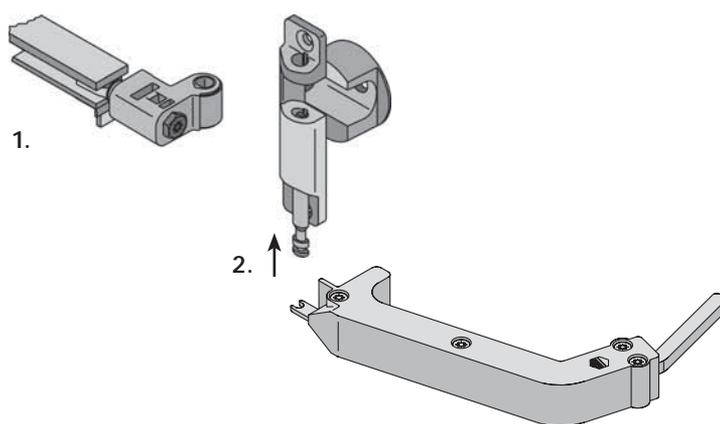

Attenzione:  
L'inosservanza potrebbe causare la caduta dell'anta!

### Aggancio dell'anta sul telaio – esecuzione ad incasso

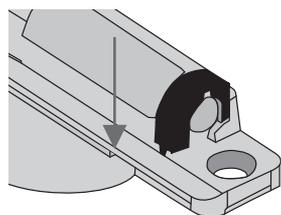

Inserire l'anta con un angolo d'inclinazione di 90° nella cerniera angolare.

1. Inserire la bandella nel supporto forbice e chiudere l'anta (non serrarla).
2. Inserire il perno del supporto forbice fintanto da riuscire ad inserire il blocco di sicurezza (vedi dis.)!

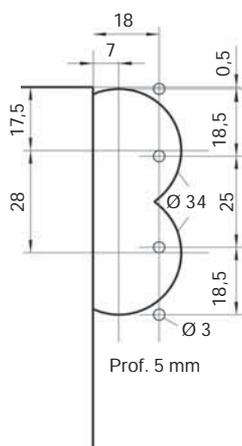

Attenzione:  
L'inosservanza potrebbe causare la caduta dell'anta!

3. Inserire il blocco di sicurezza (vedi dis.).
